Index

1. Introduction
2. Objectives
3. Problem Statement
4. Hardware/ Software Requirements

Introduction

The thirst for learning, upgrading technical skills and applying the concepts in real life environment at a fast pace is what the industry demands from IT professionals today. However busy work schedules, far-flung locations, unavailability of convenient time-slots pose as major barriers when it comes to applying the concepts into realism. And hence the need to look out for alternative means of implementation in the form of ladder approach.

The above truly pose as constraints especially for our students too! With their busy schedules, it is indeed difficult for our students to keep up with the genuine and constant need for integrated application which can be seen live especially so in the field of IT education where technology can change on the spur of a moment. Well, technology does come to our rescue at such times!!

Keeping the above in mind and in tune with our constant endeavour to use Technology in our training model, we at Aptech have thought of revolutionizing the way our students learn and implement the concepts using tools themselves by providing a live and synchronous eProject learning environment!

So what is this eProject?

eProject is a step by step learning environment that closely simulates the classroom and Lab based learning environment into actual implementation. It is a project implementation at your fingertips!! An electronic, live juncture on the machine that allows you to

- Practice step by step i.e. ladder approach.
- Build a larger more robust application.
- Usage of certain utilities in applications designed by user.
- Single program to unified code leading to a complete application.
- Learn implementation of concepts in a phased manner.
- Enhance skills and add value.
- Work on real life projects.
- Give a real life scenario and help to create applications more complicated and useful.
- Mentoring through email support.

The students at the centre are expected to complete this eProject and send complete documentation with source code to eProjects Team Looking forward to a positive response from your end!!

Objectives of the project

The Objective of this program is to give a sample project to work on real life projects. These applications help you build a larger more robust application.

The objective is not to teach you concepts but to provide you with a real life scenario and help you create applications using the tools.

You can revise them before you start with the project.

It is very essential that a student has a clear understanding of the subject.

Kindly get back to eProjects Team in case of any doubts regarding the application or its objectives.

Problem Statement

Problem statement is attached separately in a file
“COVID TEST and VACCINATION System”

Standards plan:

Every code block must have comments.

The logic of the program needs to be explained. Proper documentation should be maintained.

Complete Project Report along with synopsis, code and documentation should be prepared.

Documentation:

No project is complete without documentation. In fact, it is one of the most important activities during the development of a project. The documentation of an ideal project will be in the form of a project report comprising of the following documents:

- Certificate of Completion.
- Table of Contents.
- Problem Definition.
- Customer Requirement Specification.
- Project Plan.
- E-R Diagrams.
- Algorithms.
- GUI Standards Document.
- Interface Design Document.
- Task Sheet.
- Project Review and Monitoring Report.
- Unit Testing Check List.
- Final Check List.

Hardware Software

Hardware

- A minimum computer system that will help you access all the tools in the courses is a Pentium 166 or better
- 128 Megabytes of RAM or better
- Operating System
- LINUX / Windows 2000 Server (or higher if possible)

Software

- PHP
- MySQL
- PERL
- Apache

Requirement Specification

Introduction : –

Across the world, people are facing unforeseen challenges due to Coronavirus pandemic. Design and develop a web application for online test and vaccination booking system for patient. The Covid 19 web app connects the people with the hospital and the administration to come together and fight the pandemic. With this web app, one can track the vaccination appointment, history and covid solution guidelines for symptoms.

Proposed Solution : –

App will provide Online Registration System (ORS) is a framework to link various hospitals across the country for mobile number based online registration and appointment system. Portal facilitates online appointments for vaccination. Detail reports showing information about test and vaccination patients taking appointment through this portal can be seen. Hospitals can come on board this platform and provide their appointment slots for online booking by patients. The system facilitates Hospitals to easily manage their registration and appointment process and monitor the flow of patients

Modules Description

Admin:-

All patient details

- View all patient profile details

Report of COVID – 19

- patient, COVID – 19 test report(Date wise report)
- Admin can export the details in xls format by date , week and month wise report

List of vaccine

- available or unavailable
- Admin can view the availability of the vaccination

Approve Hospital Login

- Approve or Reject
- Once the request for appointment from patient side, it will be approved from the admin

List of hospitals

- Admin can view the hospital details

Booking Details

- Admin can view the booking details from patient side for booking COVID-19 test results

Hospital:-

Register & Login

- Can register and login into the app with hospital name, address and location details.

List of patient details

- Hospitals can be view the patient details who are all approve for COVID – 19 tests.

Request from patient

- Hospitals can be request to the patient from the hospital side who are all approved / rejected for covid – 19 test / vaccination.

Update covid – 19 result

- Hospitals will be updated the patient's covid – 19 results.

Update vaccination status

- Hospitals will be updated the patient's vaccination status.

Patient:-

Register & Login

- Patient can register and login into the app with patient name, address and location details.

Search covid-19 / vaccination hospital

- Patient Can search the covid-19 hospitals and get from the vaccination hospitals

Request for covid-19 test / vaccination hospital

- A Patient Can request to the hospital for the covid-19 test. It will approve patient can take vaccination from the hospitals

Report of covid test/Vaccination taken

- A Patient can take the covid-19 test result report and their suggestion vaccination.

Book Hospital appointment

- A Patient will booking the appointment from the hospitals and tested the covid-19 tests.

My Appointment

- A Patient will check the appointment timing and hospital details from the My Appointment module.

View Results

- A Patient can view their covid-19 test results and vaccination suggestions also.

My profile

- A patient will check the profile details and also edit or delete the other information also.

ERD Diagram

Project Overview:

The project is a web-based application designed to provide COVID-19 related information and services. The system consists of a main website and three dashboards, each serving a specific role.

1. Website (Homepage)

- The homepage is focused on COVID-19 awareness.
- It provides details about symptoms, preventive measures, and general guidance.
- The design is simple, clean, and user-friendly, making it easy for visitors to read and understand.
- The homepage serves mainly as an informational section, while actual service operations are carried out through dashboards.

2. Patient Dashboard

- Patients can book appointments for COVID-19 tests and vaccinations.
- They can also view their appointment status and other relevant updates.
- The interface is designed to be easy to use, so patients can quickly perform necessary actions.

3. Hospital Dashboard

- Hospitals can view patient requests for tests and vaccinations.
- They have the option to approve or reject appointments based on availability.
- Hospitals can also manage schedules and patient records.

4. Admin Dashboard

- The admin has overall control of the system.
- They can manage hospitals, patients, and vaccination/test data.
- Admin ensures smooth coordination between patients and hospitals.

“Overall, the system provides a complete solution for COVID-19 awareness, test booking, and vaccination management. The combination of a simple homepage and role-based dashboards makes the application effective and easy to operate.”

Login Register Module:

The system provides a Login and Signup feature for patients, hospitals, and admins.

- **Patients** can create an account and log in immediately to book appointments for COVID-19 tests or vaccinations.
- **Hospitals** must first sign up and then wait for admin approval before they can access their dashboard. This ensures that only verified hospitals are part of the system.
- **Admins** log in directly to manage patients, hospitals, and overall system operations.

This module ensures secure and role-based access, preventing unauthorized use and maintaining proper verification.
